

a 2007 0225

The invention refers to agriculture, particularly pomiculture.

The invention includes application of 20...40 t/ha of organic fertilizers immediately after grubbing of the old orchard and cultivation during three years of annual plants as green fertilizer, after plowing of which the soil is annually loosened at a depth of 60...70 cm with the distance of 120...140 cm between the fissures of the loosener.

The result of the invention consists in reducing the period of soil disintoxication and in excluding the need for plantage plowing.
