The invention refers to sanocreatology, microbiology and medicine, namely to a method for determining the state of intestinal bacteriocenosis to children of early age and can be applied for determining the level of health of children at the age of 1...3 years.

The claimed method includes determination of the quantitative content of microorganisms from *Lactobacillus* genus in the intestinal content and assessment of the intestinal bacteriocenosis state. At the same time, the bacteriocenosis state is determined by the quantitative content of microorganisms from *Lactobacillus* genus expressed in the value of decimal logarithm of the living microbial cells amount in 1 g of intestinal content, according to which it is assessed the sanogenic, intermediate and pathologic state, when the obtained values constitute, correspondingly: 10,14...7,83; 7,82...5,88 and 5,87...1,00 – for children under 1 year old, 9,02...7,48; 7,47...5,57 and 5,56...1,00 – for children under 2 years old and 8,79...7,23; 7,22...5,08 and 5,07...1,00 – for children under 3 years old.
