

a 2008 0106

The invention relates to the feed industry and can be used for additional feeding of wild animals.

The additional feeding is carried out with fodder prepared from fresh apple pulp, dried common nettle (*Urtica dioica* L.) harvested in the flowering period, placed in layers with the thickness of 15...20 and, respectively, 8...10 cm, and salt, taken in the following ratio, mass %:

fresh apple pulp 90.0...91.5

dried common nettle 9.0...9.5

salt 0.3...0.5.

At the same time, the additional feeding is carried out in frosty days before noon, in frost-free days in the afternoon.
