

a 2013 0004

The invention relates to an electrophoto-graphic information carrier and can be used in optoelectronics and photonics for recording of photographic and holographic images.

The carrier, according to the invention, comprises a base, a polymeric electrophoto-sensitive layer of N-vinylcarbazole copolymer with 1-octene, sensitized with 2,4,7-trinitro-fluorenone, and a thermoplastic visualizing layer, at the same time the polymeric electro-photosensitive layer additionally comprises 3...10 mass % of zinc tetrabenzoxyphta-locyanine dye, and the thermoplastic visualizing layer is made of styrene-octyl metha-crylate copolymer.
