

a 2015 0066

The invention relates to agricultural machinery industry, namely to cutters of the rotary mower for cutting and chopping herbs.

The cutter, according to the invention, comprises a rotor with disc (2) and knives (1). Each knife (1) is mounted on the disk (2) of the rotor by means of a flexible coupling, consisting of two parallel steel cables (3), having one end fixed on the disc (2) of the rotor, and the opposite end on the knife (1) by means of holders.
