

The invention relates to razor systems, comprising a handle and replaceable cartridges and providing liquid delivery to the user's skin during use.

The razor system comprises a handle (1) with an internal liquid passage channel (2); a transition head (3), fixed on the proximal end of the handle (1), with a slot channel (4), communicating with the channel (2) of the handle (1), with a removable cartridge (7) and its holder (5), fixed on the proximal end of the head (3) and made in the form of a rocker with an internal slot channel (6), communicating with the channel (4) of the head; an adapter (8) with an internal liquid passage channel (9), made with the possibility of connection to a liquid source. The couplings of the adapter (8) with the handle (1), of the handle (1) with the head (3), of the head (3) with the cartridge holder (5) are made detachable by means of a pin/plug connection.
