

The invention relates to razor systems comprising a handle and replaceable cartridges and providing liquid delivery to the user's skin during use.

The razor system comprises a handle (1) with an internal liquid passage channel (2); a transition head (3) on the proximal end of the handle (1) with a slot channel (4) communicating with the channel (2) of the handle (1); a cartridge holder (5) in the form of a rocker with an internal slot channel (6) on the proximal end of the head (3), communicating with the slot channel (4) of the head (3); a removable cartridge (7) and an adapter (8) with an internal liquid passage channel (9), connected to the liquid source. The couplings of the adapter (8) with the handle (1), of the handle (1) with the head (3), of the head (3) with the cartridge holder (5) are made detachable by means of a pin/plug connection.
