The invention relates to biotechnology, in particular to a process for cultivation of *Rhodotorula gracilis* yeasts, which can be used to produce proteins used in the microbiological, food, pharmaceutical and cosmetic industries.

The process, according to the invention, comprises preparing a yeast suspension of *Rhodotorula gracilis* CNMN-Y-30 and *Rhodotorula gracilis* CNMN-Y-03 strains, grown for 24 hours on YPD medium, inoculating the suspension in a concentration of 5% volume and cultivating on YPD medium with the addition of 50 nm ZnO nanoparticles in a concentration of 20.0 mg/L in sterile conditions, at 25...28°C with continuous stirring at 180...200 rpm for 72 hours.
