

a 2012 0063

The invention relates to biotechnology, in particular to a strain of *Saccharomyces cerevisiae* yeast and can be used in the po-lysaccharide production technology, particularly mannans used in wine-making, pharmaceutical and food industries.

The yeast strain is deposited in the National Collection of Nonpathogenic Microorganisms of the Institute of Microbiology and Biotechnology of the ASM under the number CNMN-Y-18 and can be used as a source of mannans.
