

a 2005 0195

The invention refers to medicine, namely to the anatomicopathological technique and is meant for obtaining preparations of the blood vessels and of the bronchial tree ramifications.

Summary of the invention consists in that it is carried out preparation of the organocomplex, at the same time all hollow organs, entering in its composition, are filled with air under the pressure of 1,1...1,3 Pa. It is prepared an injectable mass by mixing the powder and liquid of the self-solidifying plastic material Redont-03 in the ratio of 1:(4...6). Then the blood vessels are filled with the injectable mass, and after its polymerization it is carried out corrosion of the tissues and washing of the preparation.
