The invention relates to a herbicidal suspension containing a sulfonylurea compound or its salt as a herbicidally active compound.

The herbicidal suspension, according to the invention, comprises from 0.5 to 20 parts by weight of a sulfonylurea compound selected from the group consisting of azimsulfuron, bersulfuron-methyl, flazasulfuron and nicosulfuron or its salt from 0.5 to 35 parts by weight of at least one surfactant selected from the group consisting of an alkoxylated sorbitol fatty acid ester and an alkoxylated sorbitan fatty acid ester, from 0.5 to 55 parts by weight of at least one surfactant from the group consisting of an polyoxyethylene castor oil and polyoxyethylene hydrogenated castor oil and a water-immiscible diluent as the main component of the rest.

The method, according to the invention, provides for applying of a herbicidally effective amount of the herbicidal suspension to the undesired plants or to a place where they grow.

The result of the invention consists in increasing the stable herbicidal effect, which is harmless for crops.
