The invention refers to biotechnology, namely to a strain of microscopic fungi of *Penicillium* genus, that can be used in microbiological industry and with the purpose of environmental protection for decomposition of xenobiotics. The strain of microscopic fungi *Penicillium corylophilum* is deposited with the National Collection of Nonpathogenic Microorganisms of the Institute of Microbiology and Biotechnology of ASM under the number CNMN - FP - 04 and provides for the concomitant decomposition of atrazine and benzothiazoles.
