

The invention relates to herbicidal compositions containing as active ingredients a benzoylpyrazole derivative in combination with other herbicidal compounds.

The problem solved by the present invention consists in the development of herbicidal compositions having a wider herbicidal spectrum, as well as a highly active and long-lasting herbicidal activity.

The herbicidal compositions comprise as active ingredients (a) a herbicidal benzoylpyrazole compound represented by the formula (I) or its salt:

wherein R¹ is ethyl, R² is a hydrogen atom, R³ is methyl, R⁴ is methyl, R⁵ is -OCH₂CH₂OCH₃, R⁶ is -SO₂CH₃, A is -CH(CH₃)-, and (b) other herbicidal compound, represented by at least one known compound selected from a group of compounds as defined in the claims.

The compositions, according to the invention, exhibit a herbicidal synergic effect in controlling a wide range of undesired plants.
