The invention relates to the field of pharmaceuticals, namely to preparations with anti-inflammatory action intended for the treatment of benign prostatic hyperplasia, associated or not with chronic prostatitis.

Summary of the invention consists in that an active complex of 3...4th instar *Lymantria dispar* larvae is proposed. A process for producing an active complex of *Lymantria dispar* larvae is claimed, which includes growing of *Lymantria dispar* insects in artificial conditions, freezing of larvae at a temperature of -18°C, washing and primary grinding thereof, lyophilization of the active complex and its grinding at a temperature of -55°C, homogenization, packaging of the active complex and storage at a temperature of -18°C. Pharmaceutical preparations in the form of rectal suppositories, capsules and tablets containing an active complex of *Lymantria dispar* larvae are also claimed.
