

a 2019 0072

The invention relates to the field of chemistry and medicine, namely to a new compound with hybrid terpene and 1,3,4-thiadiazole skeleton, which can be used in medicine as an antifungal drug.

According to the invention, claimed is 5-(homodrim-6,8-diene-11-yl)-1,3,4-thiadiazol-2(3*H*)-imine compound of the formula:

which exhibits pronounced antifungal properties and to a lesser extent antibacterial properties.
