

s 2016 0037

The invention relates to cryobiology and zootechny, namely to a bull sperm thawing medium.

The bull sperm thawing medium comprises sodium citrate, L-thyroxine and distilled water, in the following component ratio:

sodium citrate, g 1.5...2.0

L-thyroxine, µg 30...50

distilled water, ml up to 100.

The result is to maintain at a high level the mobility of gametes and the integrity of acrosome after thawing.
