The invention relates to the food industry, namely to processes for producing a natural and concentrated acidifier from apples.
The process for producing an acidifier from apples, according to the invention, comprises the reception of apples with a content of dry substances of $10.0 \ldots 13.9 \%$ and a titratable acidity, recalculated in terms of malic acid, of $1.7 \ldots 3.0 \%$, washing, crushing thereof, heating the resulting pulp to $45 \ldots 50^{\circ} \mathrm{C}$, treatment with pectolytic and amylolytic enzymes for $25 \ldots 30 \mathrm{~min}$, pressing, settling, clarification, filtration of the obtained must and heat treatment at a temperature of $60^{\circ} \mathrm{C}$ for 20 min . In a variant for the preparation of the concentrated acidifier after thermal treatment is carried out the concentration at a temperature of $50^{\circ} \mathrm{C}$ and pressure of 0.95 bar to a content of water-soluble substances of $55^{\circ} \mathrm{Brix}$.
