

s 2021 0069

The invention relates to apiculture, namely to a process for feeding bees.

The process, according to the invention, includes feeding the bees in spring with a mixture of 50% sugar syrup and 1.0-3.0 mL/L of aqueous solution containing dehydroabietic acid 4.91 g, KOH 1.08 g and distilled water up to 200 mL, in an amount of 1.0 L of mixture per bee family, every 7 days, from April to the main honey flow.

The result of the invention consists in increasing the strength of bee families, egg laying by queens, the number of capped brood and honey production.
