

The invention relates to agricultural machinery industry, namely to trailers and semi-trailers, in particular to tipper semitrailers.

The tipper semitrailer comprises a chassis (1), equipped with a running gear (7), a hitch mechanism (5) and a telescopic support (6). On the chassis (1) is pivotally installed a body (2), driven by two tipping hydraulic cylinders (3), the ends of the rods of which are pivotally fixed to the lugs of the body (2), and their bodies are pivotally fixed to the chassis (1) through the fixing lugs of an intermediate frame (4), from the front part of which are made fixing lugs of the frame (4) to the chassis (1). On the sides of the frame (4) are made fixing lugs of the frame (4) to the body (2). The intermediate frame (4) is equipped with limiters and centering pins.
