The invention relates to apiculture, namely to a process for feeding bees.

The process, according to the invention, includes feeding the bees in autumn with a mixture of 60% inverted corn syrup and 1.0-3.0 mL/L of 3% aqueous solution of rebaudioside A, in an amount of 2.0 L per bee family and in spring with a mixture of 50% inverted corn syrup and 1.0-3.0 mL/L of 3% aqueous solution of rebaudioside A, in an amount of 1.0 L per bee family, every 7-9 days, from April to the main honey flow.

The result of the invention consists in increasing the immunity and winter hardiness of bees, the strength of bee families, egg laying by queens, the number of capped brood, and in increasing the honey production.
