

97-0005

The invention relates to the agriculture, particularly to the devices for settling the insects used for plants pest control.

The device comprises a vertical placed cylindrical body (1) in which is dislocated a screw (4) transversal to the axes having a helical groove (5) with angle lift no more than 35°. Above the shaft is located an alimentation funnel (11), the around neck lower part of which is provided with a soft washing (3).

The technical result consists in diminuation of the biological material damage by means of reducing the time of mechanical interaction thereon.
