

**97-0095**

The invention relates to the medicine, namely to the medical equipment having the application in the normal and morbid anatomy.

The table comprises legs (3), a working surface (1) with a bed (2), gutter discharge channel, a sink (7) with a mixer (8) a small dissecting table (6). The working surface of the table is made at one end with the U-formed configuration, around the configuration perimeter there is installed a gasket (12). The bed of the anatomical push-cart (10) provided with a lifting-lowering mechanism (11) and congruently attached to the surface of U-shaped configuration table, serves as a bed.

The technical result consists in simplification of the dissection procedure, reducing the emotional action time and influence of the harmful factors on the personnel.
