

a 2015 0022

The invention relates to pieces of furniture with heating elements, in particular to ergonomic elements for uniform heating with infrared rays.

The ergonomic element for uniform heating with infrared rays is mounted in a chair and is made in a form, repeating the curves of the vertebral column. The ergonomic element for uniform heating with infrared rays is a lamp of quartz glass, organic glass, or a metal tube. The ergonomic element is connected to an electronic control panel.
